

Let Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner™ get the “GUNK” out!

More information about what our product can do for you and your family:

Jetted Bathtubs, Whirlpools, Jacuzzis, and other warm/hot water vessels that are frequented by us can gunk up your plumbing and shell with relative ease. As we enjoy soaking in the warm or hot water our bodies eliminate lots of organics like sweat, exfoliated skin and hair. Other products such as soap residues, lotions, cosmetics and bath mixtures are also part of the problem. In time, usually over a month or two, these contaminants can cause a bacteria buildup and clog, discolor, and stick to every surface that the water comes in contact with. This is why you may see black flecks of bacteria and gunk in jetted bathtubs, especially when the jets are operating. These specks are unsightly, they smell, and they prevent you from enjoying a safe and thoroughly cleansing, healthy soak. We have a unique gel that will solve this problem quickly. It is called Hot Tub & Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner. It is thoroughly effective, works quickly, and is easy for you to use. It breaks the bond of these nasty deposits and allows you to simply flush them down the drain.

There are many products on the market that claim to rid your tub of contaminants and gunk build-up. However, there is no other product on the market that looks and works as effectively as our Hot Tub & Ahh-Some Hot Tub & Jetted Bath Bio-Cleaner™. Our 6 ounce container is usually enough for a full year's supply. It sells for under \$50.00 and provides for 50-60 cleanings. Most people use our product once every week or so. The gel is safe and environmentally friendly. It is so easy to use. Here's how you use the product.

For Jetted Bathtubs - Fill the tub a few inches over the top jet(s), usually 6-8" from the top of the tub. You can use cold, warm or hot water. It doesn't matter! Add a little less than one level teaspoon to the water. Turn on the pump so the jets are operating. In minutes the water will become a little foamy, this is normal. Keep the jets on for 5-10 minutes when you clean the tub for the first time. You will now see a brown and black froth appear on the water foam surface. This is the gunk coming out of the plumbing surfaces and the gunk on the tub shell you didn't know was there. Now, simply drain the water from the tub. Our product is septic tank safe. This wastewater you are draining will also help to clean the plumbing lines going to your septic or sewer system. Future cleanings will only take 5 minutes or so since the initial cleaning purged the tub of the macro materials that were building up for years or months.

For Spas & Hot Tubs -It is best to use our product just prior to you dumping the water. Typically, spa & hot tub owners change their water every 2-3 months. This product will degunk the plumbing and clean the shell quickly and effectively. Follow the same instructions as for Jetted Tubs except that we recommend that you use a full level tablespoon for most spas. Drain the discolored water, rinse and wipe the shell clean and hose off filter cartridge(s). This product has a “dual benefit”. If you wish to reduce chemicals on an ongoing basis you can add ½-1 teaspoon of gel to spa or hot tub water weekly. This will drastically reduce the amount of chlorine, bromine, Nature2 or Frog you may be using. Water quality is better and water will feel softer and silkier. this product serves a “Dual Purpose”. It is used as a Bio-Purge every 60-90 days and is also used on a weekly basis as a water clarifier and conditioner.

Unique Solutions will give you a 100% Money Back Guarantee with every purchase. If you think this product did not do the job you thought it would, send us the empty container and we will send you a check for your purchase, including the handling fee. Our products work! You'll love what they do!
