

## Ahh-Some Water Clarifier & Bio-Cleaner

Ahh-Some Water Clarifier & Bio-Cleaner can be added to your pool at any time, whether it's in use or not. There is no need to wait (to swim) after its use. If using Ahh-Some Water Clarifier & Bio-Cleaner for the first time, you will be astonished at how easy it is to use, and how hard it works to keep your pool looking great and your water chemistry in balance. And, one 6-ounce jar treats 12-15,000 gallons for 4 weeks! Follow the instructions below for best results:

- First, check the pH and total alkalinity (TA). Adjust the pH to between 7.4-7.8 and get the TA (total alkalinity) between 80-120 PPM. Ahh-Some Water Clarifier & Bio-Cleaner is a buffered product and will always try to keep your water balanced, based on the initial parameters at the time of its introduction.
- **Add Ahh-Some Water Clarifier & Bio-Cleaner to the water, at the rate of 1 ounce per 2,500 gallons of water every 4 weeks (28 days).** Add a little more in very hot and humid conditions if needed. Just scoop it out with your hand and place it in the pool proper or the skimmer. If your tile line or vinyl border is dirty, rub the Gel into those areas to clean it. Ahh-Some Water Clarifier & Bio-Cleaner will break into smaller clumps and fully dissolve in minutes. You will see a small amount of foam as you add it. This is fine!
- If you are using chlorine as a maintenance sanitizer you **MUST** add a shock treatment at the same time Ahh-Some Water Clarifier & Bio-Cleaner is added. We recommend 1-2 lbs. of granular shock for every 6 oz. container. If you have access to liquid chlorine, add 1-2 gallons for every 6 oz. container of Ahh-Some Water Clarifier & Bio-Cleaner. If you typically use a non-chlorine shock, this is ok, too. Note: It is typical for your free available chlorine (FAC) level to drop after using the Ahh-Some Water Clarifier & Bio-Cleaner. This is normal. When this occurs, your Total Chlorine level increases. Total Chlorine will give you a longer disinfecting time period, decreasing your need for Free Available Chlorine (FAC) over .5 PPM.
- We recommend that you maintain a minimum of .5 of Free Available Chlorine (FAC) for best results. In hot and humid environments where the pool gets high bather loads, you may wish to maintain 1.0 PPM or higher of FAC.
- Don't forget to add Ahh-Some Water Clarifier & Bio-Cleaner every 4 weeks. If you forget to add it, you'll see a rapid decline in water quality. If you add it on schedule, your water will be the freshest, cleanest and highest quality water that you've ever experienced. Ahh-Some Water Clarifier & Bio-Cleaner should reduce your maintenance chemical costs. The clarity and brilliance of your pool water should be the best ever. It also enhances your filter's ability to filter.

### SPECIAL NOTES ABOUT Ahh-Some Water Clarifier & Bio-Cleaner:

1. **We do NOT recommend any clarifiers, algacides or specialty chemicals when using the Ahh-Some Water Clarifier & Bio-Cleaner.** You won't need them! Of course, your local pool store may not agree. We are confident that when you use the Ahh-Some Water Clarifier & Bio-Cleaner as outlined here, your water will always look great.
2. Ahh-Some Water Clarifier & Bio-Cleaner **is not a sanitizer.** You must still maintain adequate levels of sanitizer in your pool at all times.
3. **If you use a cartridge or element filter, we recommend that you hose it (them) off before you add the Ahh-Some Water Clarifier & Bio-Cleaner.** After this, put it (them) back in your filter and add Ahh-Some Water Clarifier & Bio-Cleaner. Your cartridges or elements will be cleaned thoroughly because of Ahh-Some Water Clarifier & Bio-Cleaner's surfactant qualities. With a sand or DE filter, we recommend that you backwash the filter a day or so after starting with this program.
4. **Ahh-Some Water Clarifier & Bio-Cleaner can be used in all pool surfaces.**
5. **Ahh-Some Water Clarifier & Bio-Cleaner can be used with any and every sanitizing program on the market.**
